PEST MANAGEMENT BULLETIN

The *Pest Management Bulletin* is published quarterly by the US Army Center for Health Promotion and Preventive Medicine, 5158 Blarney Road, Aberdeen Proving Ground, MD 21010-5403, or call us at DSN 584-3773 or commercial (410) 436-3773.

The contents of the Pest Management Bulletin and views expressed are at the discretion of the Entomology Programs. They do not represent official views or policies of USACHPPM or of a pesticide or a commercial product does not constitute an endorsement or recommendation of the Entomology Program, USACHPPM, or the U.S. Army. Reproduction of this bulletin or use of its contents, except by Federal agencies, is not allowed without specific written permission from USACHPPM.

Home Uses		
Site	Mitigation Measures	Effective Dates
<p>Indoor Uses All uses inside any structure, vehicle, vessel, aircraft, or enclosed area and/or on any contents therein (except mushroom houses), including residences, food/feed handling establishments, schools, museums, stores, hospitals, sports facilities, warehouses, and greenhouses. All indoor pet uses including pet collars.</p>	<p>Product registrations are being canceled or amended to delete indoor uses from end use product labels (except use in mushroom houses). EPA's Federal Register notice of January 10, 2001, proposed to delete these uses.</p>	<p>Cancellations become effective after the 30-day public comment period, upon issuance of a cancellation order in February 2001.</p> <p>As of March 1, 2001, manufacturing use products may no longer be used to formulate end use products for indoor uses, an</p> <p>Retailers stop sale December 31, 2002an</p>

Agricultural Uses Proposed for Cancellation		
Crop	Action	Effective Dates
Alfalfa	Parsnipsn	
Bananas	Pastures	
Beans (dried)	Peppers	
Bermudagrass	Irish Potatoes	
Celery	Sweet Potatoes	
Red Chicory (radicchio)	Rangeland	
Citrus	Sheep	
Clover	Sorghum	
Coffee	Spinach	
Cotton	Squash (summer and winter)	
Cowpeas	Strawberries	

So, what does all of this mean to you? First of all, you can see how easy it might be to buy a product and not have the use pattern you need on the label – even if you know an EPA Registration Number. Secondly, you can see that product brand names can be very confusing, or nearly meaningless. So, when you are buying or using a pesticide product, remember that **“THE LABEL IS THE LAW”** and read the label carefully to be sure the site/pest combinations in which you are interested, are on the label.

termites penetrate a termite treatment barrier? One finding was that termites can penetrate treated soil by lining their tunnels with untreated soil. Termites will make a determination on where to locate based on wood volume. Some termites will aggregate their young on a food resource. It has been shown that they will tend to aggregate at large bait bundles. Refer to the January 2001 article in

7. Only 1st and 2nd instars indicates that a capsule was deposited nearby.

* Several size nymphs indicates closeness to the harborage.

8. How long can cockroaches live on the traps? Adults: 7-10 days , Nymphs: 2-4 days.

9. Zero counts on sticky traps for short periods (24 hours) alone does not confirm that cockroaches are absent. However, traps consistently empty in well placed pest vulnerable areas (PY

Remember these points: (1) Inspect first, (2) Use multiple methods of monitoring, (3) Keep good records, (4) Use baits for ants and roaches, (5) No routine use of residual sprays or rodenticides, (6) If residuals are used, don't apply when children are present, (7) Establish a reasonable re-entry period for occupants.

FIVE KEYS TO EFFECTIVE RODENT CONTROL

"Know your stuff"

"There wasn't even a place to wash up after you finished spraying. Just a fountain where you washed your hands," he06 7091c7.2(T)-id.

While the men were paid \$11 an hour, the city paid Clarke \$650 an hour per truck.

After a month or so, the men said, they got to see an OSHA film about pesticides.

Many of the farmers operate mixed potato and dairy farms, and are among the country's heaviest the growing season, using up to 43 active ingredients. Direct skin contact with pesticides, leaky sprayers, and a lack of protective clothing all contribute to the farmers' health problems. This contact with chemicals was shown to have harmful neurological effects, interfering with the
